

MOCKUP - FOR DISCUSSION

Co-Reg Lead to Call Center App

Screens for the SMS qualification flow and the agent call center web app, built from the MVP Flow v1.0 workflow.

01 SMS qualification, as the lead sees it

03 Technical questions before build

05 Agent workspace

07 Admin: scoring rules and tiers

02 What happens when a reply comes in

04 Priority queue

06 Lead timeline

SMS qualification, as the lead sees it

Three automated questions, one at a time. Each reply moves the lead forward. STOP ends everything immediately.

Happy path

Completes all three, enters queue as HOT

Secure Medical
+1 (480) 555-0100

Secure Medical: Hi Jordan, you asked about health & wellness options. What interests you?
Reply 1 Supplements, 2 Telehealth/Rx, 3 Both. Reply STOP to opt out.

3

Great. When are you looking for help? Reply 1 Today, 2 This week, 3 Just researching.

1

How would you like us to help?
Reply 1 Call me now, 2 Text me, 3 Contact me later.

1

Thanks Jordan. A team member will call you shortly from this number.

Opener is 158 characters

Sender name and opt-out included. Fits one segment on Express delivery; Standard (130) would need trimming.

Invalid reply

Clarify once, then route for manual review

Secure Medical
+1 (480) 555-0100

Secure Medical: Hi Maria, you asked about health & wellness options. What interests you?
Reply 1 Supplements, 2 Telehealth/Rx, 3 Both. Reply STOP to opt out.

what is this about?

Sorry, please reply with just a number: 1 Supplements, 2 Telehealth/Rx, or 3 Both.

idk maybe the second

No problem. Someone from our team will reach out to help.

Lead enters queue flagged "Needs review" with the raw replies attached.

Next question only after a valid answer

An off-script reply never advances the sequence.

STOP

Suppressed immediately, no further messages

Secure Medical
+1 (480) 555-0100

Secure Medical: Hi Dana, you asked about health & wellness options. What interests you?
Reply 1 Supplements, 2 Telehealth/Rx, 3 Both. Reply STOP to opt out.

STOP

You've been unsubscribed and won't receive further messages from Secure Medical.

Number added to DNC list. Blocked from SMS and outbound calls in the app. If resold later, stays suppressed.

No medical questions

Nothing about conditions, symptoms or medications at this stage.

What happens when a reply comes in

Every reply is just a phone number and text. The app decides what it means by checking for an open conversation and its current step.

Separate case: new lead arrives, phone number already exists

1. Partner delivers lead (any time later)
2. Look up phone in database
3. Phone on DNC? Create lead as 'Suppressed', send nothing, stop
4. Old conversation still open? Set it to expired
5. Create NEW lead record (new lead_id)
6. Link new lead to old lead by phone
7. Send opening SMS, new conversation status = open, step = 1
8. Queue shows: 'Seen before, stopped at Q2'

Rule: only ONE open conversation per number

CONVERSATION STATUS

open	waiting for an answer (step 1, 2 or 3)
completed	all three answered, scored
expired	quiet too long, or replaced by new lead
suppressed	replied STOP, on DNC
review	invalid reply twice, agent handles

Auto-expire

Open conversation with no reply for X days (suggest 7) becomes expired. X is admin-editable.

Technical questions before build

Answers needed to size the first phase accurately. Grouped by system.

1. EZ TEXTING

1. API documentation and credentials for your account (send message, contacts, inbound messages).
2. Webhook: is the inbound-message postback enabled on your plan? Can you share the exact payload format?
3. Delivery type on the account: Standard (130 char) or Express (160 char)? Affects opener copy.
4. Which number sends the messages, and is 10DLC registration already done?
5. Sandbox or test number for development?

2. LEAD PARTNER

1. Who is the partner, and do they have integration docs?
2. How exactly does a lead arrive today: pushed to EZ Texting directly, a file, an API call, or a form post?
3. Does the app need its own webhook to receive leads from the partner, or does it read new contacts from EZ Texting?
4. Sample lead payload (field names, formats, source ID examples).
5. Expected volume: leads per day, peak per hour, batch or one at a time.

3. TWILIO

1. Existing Twilio account, or should I set one up under yours?
2. Phone number already purchased? Should caller ID match the EZ Texting number?
3. Call recording required? If yes, which states are leads from (two-party consent)?
4. Voicemail drop or inbound calls needed, or outbound browser calling only?

4. STACK AND HOSTING

1. Proposed: Supabase (Postgres, auth, realtime) plus a small API service for webhooks. Any objection or existing standard?
2. Hosting: your infrastructure or mine? Any cloud preference (AWS, Vercel, other)?
3. Existing user directory for agent login (Google Workspace, Microsoft), or standalone accounts?
4. Does any health information enter agent notes? Decides whether HIPAA-grade storage and a BAA are in scope.

5. USERS AND ACCESS

1. One shared dashboard for the whole team, or a separate login and view per agent? Separate views mean user accounts, roles (agent / admin), lead assignment and per-agent callbacks. That is a distinct chunk of work and changes the phase estimate.

Priority queue

Every responder appears here. Sorted by score, then freshness, so the newest high-intent lead is always at the top. Updates live as replies arrive.

LOW	Tom W.	OH	Supplements	-	-	25	41:02	CORE-G-27	Stalled at Q2	

Lead age in minutes:seconds
Speed to contact is the whole point, so age is always visible and ticking.

One agent per lead
"In progress" locks the lead so two agents never call the same person.

Partial responders visible
Stalled and needs-review leads show in LOW with the reason, pending your answer to question 4.

05 - SECTION B

Agent workspace

One screen. The agent sees who the lead is, what they said, and can call, text, note, schedule and disposition without leaving the page.
